Skill loom

AN-001
HOW IT WORKS
ONE CARD, AS MANY HANDS AS READ IT

How does one written skill turn into the same good work for many people?

A skill is a card with 5 columns of holes: name, trigger, steps, rules, checks. Each of its 8 rows is one step of the work. Where the card has a hole, a needle rises and lifts the threads of that column, so the loom weaves the same small picture every time. The harness is tied up in repeats, so a bigger scope does not need a bigger card: an example shop of 5 people gets 1 picture at the Person scope and 5 at the Org scope from the same card.

5 columns
NAME, TRIGGER, STEPS, RULES, CHECKS

8 rows
ONE PER STEP OF THE WORK

23 holes
PER CARD, PER PICTURE

115 raised cells
AT ORG SCOPE, ALL ALIKE

01 **Card cabinet**
Five drawers, one per scope. The open drawer is the scope in use.

02 **The card**
Five columns of holes; each row is one step of the work.

03 **Read head**
Holds the card over the needles.

04 **Harness frames**
One frame per column. A needle through a hole lifts its frame.

05 **Warp threads**
Each thread rides on one frame, repeated once per reader.

06 **Reed**
A comb that keeps the threads evenly spaced at the fell.

07 **Cloth**
The result: raised cells where the card had holes, the same for every hand.

08 **Warp beam**
Holds the threads before they are woven.

09 **Take-up beam**
Draws the finished cloth forward one row at a time.
